

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Original) A container assembly comprising a container body defining a main compartment; a hollow insert located in the main compartment to form a secondary compartment within the main compartment; the secondary compartment having a closure means for sealing a liquid therein; and the container body having a lid to close the main compartment.
2. (Original) A container assembly as claimed in claim 1 in which the assembly includes locating means to locate the insert in the main compartment.
3. (Original) A container assembly as claimed in any one of the preceding claims in which the main compartment includes a sleeve insert.
4. (Original) A container assembly as claimed in claim 3 in which the sleeve insert is a split sleeve.
5. (Original) A container assembly as claimed in claim 4 in which the sleeve parts of the split sleeve are resiliently deformable.
6. (Currently amended) A container assembly as claimed in ~~any one of~~ claim 3 [[to 5]] in which the sleeve parts terminate in axially inwardly extending lips.
7. (Currently amended) A container assembly as claimed in ~~any one of~~ claim 3 [[to 5]] in which the sleeve parts have screw thread formations extending from an inside surface of each part.

8. (Currently amended) A container assembly as claimed in ~~any one of~~
~~the preceding claims~~ claim 1 in which the insert is cylindrical.

9. (Currently amended) A container assembly as claimed in ~~any one of~~
~~claims~~ claim 2 [[to 8]] in which the locating means is an outer screw thread on the insert
for engagement with screw thread formations on a two part sleeve.

10. (Currently amended) A container assembly as claimed in ~~any one of~~
~~claims~~ claim 2 [[to 8]] in which the insert has two cylindrical sections, a first section
having a larger diameter than a second section.

11. (Original) A container assembly as claimed in claim 10 in which the
insert has a cylindrical operatively lower hollow section and a frusto conical operatively
upper hollow section.

12. (Currently amended) A container assembly as claimed in ~~any one of~~
~~claims 10 or~~ claim 11 in which the first cylindrical section of the insert is its engagement
means for frictional engagement with an inwardly extending lip formation in which each
part of [[the]] a two part sleeve located in the compartment terminates.

13. (Currently amended) A container assembly as claimed in ~~any one of~~
~~the preceding claims~~ claim 1 in which the container lid has a circumferentially extending
slot for engagement with an upper edge of the container body.

14. (Original) A container assembly as claimed in claim 13 in which the
upper edge of the container body is a right-circular upwardly extending rim section for
engagement with the complementary shaped slot in the lid.

15. (Currently amended) A container assembly as claimed in ~~any one of~~
~~the preceding claims~~ claim 1 in which the lid includes notification means.

16. (Currently amended) A container assembly as claimed in ~~any one of~~
~~claims 1 to 14~~ claim 15 in which notification means is provided in the form of a sticker located under the lid on the closure means.

17. (Currently amended) A container assembly as claimed in ~~any one of~~
~~the preceding claims~~ claim 1 in which the closure means of the insert is a disc.
